San Antonio, Texas - [Wildlife Partners](#) is pleased to announce that it has engaged [Relevant Strategies & Solutions](#) (RS&S) to create a feasibility plan, site concept, visitor experiences, and a sustainable operating plan for a new multi-million-dollar wildlife safari park in San Antonio.

With visitor experiences and animal welfare as the core drivers to its development, the RS&S team with [CLR Design](#), a leading zoo and habitat design firm, will bring innovation, technology, and out-of-the-box thinking to the project. “We believe that it is an ideal time to recreate how zoos are presenting wildlife for public display,” said Brian Gilroy, CEO of Wildlife Partners. “It is our hope to bring Tesla/SpaceX-like creativity to this project. If we can envision going to Mars, surely, we can envision a better approach for educating, entertaining, and inspiring generations with captive animals.”

Wildlife Partners is engaged in the exotic wildlife breeding and conservation industry. It manages more than 7,000 acres of ranchland in Texas. On these properties, there are more than 50 species of non-native/exotic wildlife. Wildlife Partners, with the RS&S team, is evaluating numerous locations for the development of the park with the hope of securing more than 1,000 acres on the south side of San Antonio.

RS&S specializes in providing a comprehensive array of integrated strategic, business, and organizational planning services for mission-driven organizations including many of the leading zoo, aquarium, and wildlife conservation institutions across this country. RS&S’s consulting approach consistently leads to new and innovative business initiatives, partnerships, and funding strategies, helping clients to be leading, valued, and sustainable community resources.

It is anticipated that the initial feasibility study for the new wildlife safari park will be completed in the first quarter of 2022.
